**READY**

A golf-pro practices his swing by driving golf balls off the edge of a cliff into a lake. The height of the ball above the lake (measured in meters) as a function of time (measured in seconds and represented by the variable  $t$ ) from the instant of impact with the golf club is

$$58.8 + 19.6t - 4.9t^2.$$

The expressions below are equivalent:

$-4.9t^2 + 19.6t + 58.8$                       standard form

$-4.9(t - 6)(t + 2)$                       factored form

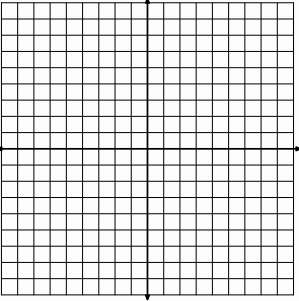

$-4.9(t - 2)^2 + 78.4$                       vertex form

- Which expression is the most useful for finding how many seconds it takes for the ball to hit the water? Why?
- Which expression is the most useful for finding the maximum height of the ball? Justify your answer.
- If you wanted to know the height of the ball at exactly 3.5 seconds, which expression would help the most to find the answer? Why?
- If you wanted to know the height of the cliff above the lake, which expression would you use? Why?

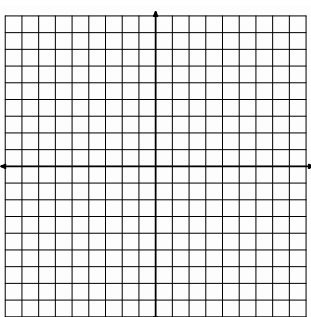

**SET**

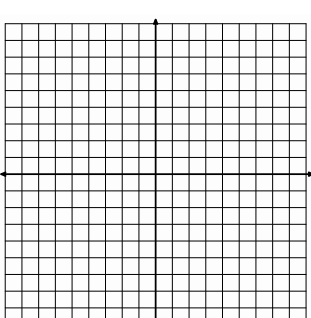

Topic: Finding multiple representations of a quadratic

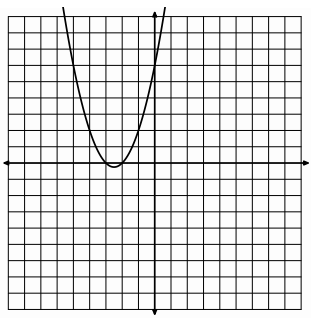

**One form of a quadratic function is given. Fill-in the missing forms.**

5 a. <i>Standard Form</i>	b. <i>Vertex Form</i>	c. <i>Factored Form</i> $y = (x + 5)(x - 3)$				
d. <i>Table</i> (Include the vertex and at least 2 points on each side of the vertex.) <div style="text-align: center;"> <table border="1" style="margin: auto;"> <tr> <td style="padding: 5px;"><math>x</math></td> <td style="padding: 5px;"><math>y</math></td> </tr> <tr> <td style="height: 100px;"></td> <td></td> </tr> </table> </div> Show the first differences and the second differences.		$x$	$y$			e. <i>Graph</i> 
$x$	$y$

Topic: Factoring Quadratics

**Verify each factorization by multiplying.**

10.  $x^2 + 12x - 64 = (x + 16)(x - 4)$

11.  $x^2 - 64 = (x + 8)(x - 8)$

12.  $x^2 + 20x + 64 = (x + 16)(x + 4)$

13.  $x^2 - 16x + 64 = (x - 8)(x - 8)$

**Factor the following quadratic expressions, if possible. (Some will not factor.)**

14.  $x^2 - 5x + 6$

15.  $x^2 - 7x + 6$

16.  $x^2 - 5x - 36$

17.  $m^2 + 16m + 63$

18.  $s^2 - 3s - 1$

19.  $x^2 + 7x + 2$

20.  $x^2 + 14x + 49$

21.  $x^2 - 9$

22.  $c^2 + 11c + 3$

23. Which quadratic expression above could represent the area of a square? Explain.

24. Would any of the expressions above NOT be the side-lengths for a rectangle? Explain.
