## Solving Equations, Literally <br> A Practice Understanding Task

3. $\frac{4 x}{3}-5=11$
4. $\frac{4 x}{3}-5 y=11$
5. $\quad \frac{2}{5}(x+3)=6$
6. $\frac{2}{5}(x+y)=6$
7. $2(3 x+4)=4 x+12$
8. $2(3 x+4 y)=4 x+12 y$

Write a verbal description for each step of the equation solving process used to solve the following equations for $x$. Your description should include statements about how you know what to do next. For example, you might write, "First I $\qquad$ , because $\qquad$ . . ."
9. $\frac{a x+b}{c}-d=e$
10. $r \cdot \sqrt{\frac{m x}{n}+s}=t$
